

# Hunter®

## ROAM with Hunter.

Feeling like you need to be in two places at once? Finally, you don't need to walk back to the controller to stop and start a manual watering cycle. The ROAM Remote lets you do just that: Roam wire-free for simple remote operation. The mid-range solution for residential and commercial applications, the ROAM will operate up to a 305 m. Keep your cool during winterization; get it done quickly and easily with only one worker instead of two. For use with Hunter controllers with SmartPort connections, the ROAM offers features other remotes cannot, at a price we all like. With a large LCD and simple push button operation, this remote is tough enough for anything with its sturdy ABS construction, but small enough to fit in your pocket. On hand and in demand.

FEATURES & BENEFITS

### Remote operation of any station or program

Operate it from up to 305 m away

### 128 different programmable addresses

Use multiple ROAM remotes in the same neighborhood

### Variable run times

Modify the run time without changing the regular program

### Uses 4 AAA batteries (included) for up to 1 year of operation

Automatic Shutoff extends battery life.

### Compatible with most Hunter controllers

Designed to work with Hunter X-Core, SRC, Pro-C, ICC, I-Core, and ACC controllers through a SmartPort Connection (included).

The ROAM Remote conveniently attaches to the controller, always ready to go.
